ARMIS®

Why Armis

Here are ten reasons how Armis gives organizations peace of mind, knowing that all critical assets are always protected.

ARMIS.

Why Armis?

It is well known among security and risk leaders that a siloed or fragmented approach cannot provide complete security to an organization. Only by seeing, protecting and managing all your assets can you stay safe, operational and secure. Only with true AI-driven asset intelligence can you stay ahead of cyber criminals and bad actors.

Armis Centrix™ is a seamless, frictionless, cloud-based platform that provides comprehensive cyber exposure management. This includes a detailed inventory of all assets, a proactive stance in addressing cyber asset risk, prioritization and remediation of vulnerabilities and other security findings, and mitigation of threats across the dynamic and expanding attack surface. Here are ten reasons how Armis gives organizations peace of mind, knowing that all critical assets are always protected.

1. Comprehensive Coverage Without Blindspots

Both known and unknown assets represent a growing attack surface yet most cyber tools and programs lack the depth of knowledge to understand and manage them. Armis eliminates the information and security silos that exist within organizations so you can have an authoritative and detailed view of every asset in your environment - whether it's OT, IT, IoT, IoMT, virtual, or cloud. The breadth, depth, and accuracy of the Armis asset inventory exceeds that of any other product on the market today.

2. AI-powered Cyber Exposure Management Platform

When you use Armis Centrix™ to manage your attack surface, you'll get real-time context-rich data and mapping that your security team can use to identify and address exposures, plan and execute a security response. No more relying on out-of-date spreadsheets or spending hundreds of human-hours a month to parse assets: Armis ensures the entire attack surface is both defended and managed in real time.

3. AI-driven Asset Intelligence Engine

Core to the Armis Platform is our Asset Intelligence Engine, the largest crowd-sourced, cloud-based asset behavior knowledgebase in the world. With an ever-growing catalog of over 5 billion assets, the Asset Intelligence Engine can append data where appropriate and compares the profiles of known assets with your assets' behavior. If anything should fall outside of acceptable tolerances we'll flag and/or quarantine assets that are not acting how they should be.

ARMIS.

4. Fit for critical infrastructure

Armis protect all verticals and industries, including environments where exposures could have national security, economic, and public health or safety consequences. With our dedicated products for Medical Device Security and Operational Technology (OT) you'll get both real time and trending data you need to make timely decisions on security, maintenance and capacity planning based on how the assets are operating. All part of the same platform.

5. Cutting through the noise

Armis Centrix™ correlates, normalizes, rationalizes, and de-duplicates data from hundreds of sources including your endpoint security solutions, vulnerability scanners, on-premise hosts, endpoints, code, cloud services, application security tools, asset inventory solutions like CMDB and many more. From employee laptops to the critical infrastructure you rely on every day, you'll have full visibility, security and control of your attack surface.

## 6. Flexible and non-intrusive

Organizations across every industry rely on sensitive systems that can't be disrupted. Armis Centrix™ can be deployed without loading agents that could steal clock cycles or destabilize the machines that they run on. Armis uses sophisticated passive and active techniques to see, protect and manage all your assets. By monitoring all managed and unmanaged devices and maintaining a comprehensive device inventory of all assets, Armis fills the gaps left by conventional security solutions, enabling complete visibility.

7. Prioritization and remediation

Armis consolidates detection tool findings and deduplicates alerts. Our technology assigns context to findings, including threat intelligence, likelihood of exploit, and asset attributes like business impact and compliance policies. The result is an automatically prioritized list of findings. Armis then generates predictive ownership rules through AI to assign fix and remediation responsibilities, and ongoing collaboration through bidirectional integrations with preferred workflow or ticketing systems.

8. Integration and orchestration

Armis doesn't just generate alerts—it integrates with your existing security and enforcement points and triggers automated actions to stop an attack. This automation gives you peace of mind that attacks on any devices will be stopped, even if your security team is busy with other priorities. Armis also integrates with your security management systems—your SIEM, SOAR, ticketing systems, asset databases, etc.—to allow these systems, personnel and incident responders to leverage the rich information Armis provides.

9. Compliance and security frameworks

Virtually every business is required to align with an alphabet soup of regulatory compliance and security frameworks. With Armis you can achieve both and maintain certifications that showcase your continued adherence to rigorous industry and government cybersecurity standards. In fact, Armis is working with some of the largest and most secured organizations globally.

10. Minutes to visibility, security and control

As soon as your data is ingested into Armis Centrix™ the time to useful insights is measured in minutes, not days or weeks. And in the fast-paced battle of cybersecurity, minutes matter. Your security team will be able to catalog your asset inventory and begin identifying threats and vulnerabilities accurately and rapidly.

40+ Fortune 100 companies trust our real-time, and continuous protection

+200k deployments worldwide in 165 countries

+500B security events handled daily by Armis Centrix™

ARMIS.

Armis, the cyber exposure management & security company, protects the entire attack surface and manages an organization's cyber risk exposure in real time.

In a rapidly evolving, perimeter-less world, Armis ensures that organizations continuously see, protect and manage all critical assets - from the ground to the cloud. Armis secures Fortune 100, 200 and 500 companies as well as national governments, state and local entities to help keep critical infrastructure, economies and society stay safe and secure 24/7.

Armis is a privately held company headquartered in California.
