

AI Assistant from Armis Centrix™ Insights

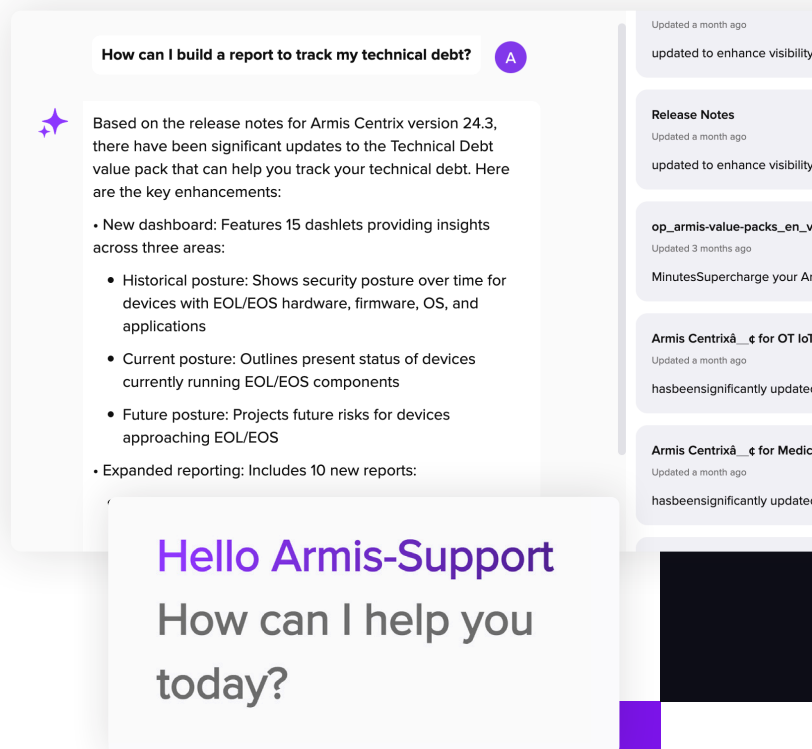

Your autonomous assistant for natural language queries and streamlined solutions.

Fast, accurate, accessible answers to the questions that matter most

Welcome to a new era of workflow transformation with Armis Centrix™ Insights. AI Assistant—a revolutionary AI-driven navigator designed to simplify your day-to-day operations. AI Assistant is here to make information retrieval and problem-solving more efficient than ever.

Elevate Your Experience with Armis Centrix Insights

The power of AI Assistant lies in its ability to transform how you interact with your data. By enabling natural language queries, autonomous issue resolution, and a seamless user experience, we aim to enhance your workflows and drive efficiency across your operations.

AI Assistant Use Cases:

Natural Language Queries

With AI Assistant, you can interact effortlessly with Armis Centrix™ using everyday language. Simply ask questions as you would in a casual conversation, and experience intuitive responses that understand context and intent. This means you spend less time searching and more time acting on insights.

Autonomous Issue Resolution

AI Assistant isn't just about finding answers—it's about solving problems. Our AI Bot can autonomously diagnose issues and provide solutions without waiting for human intervention. This autonomous assistance ensures that you receive relevant and complete answers to your questions.

Streamlined User Experience

Integrating seamlessly into your existing workflows, AI Assistant offers a streamlined user experience that minimizes disruptions. Access real-time insights and solutions that empower your operations, ensuring overall satisfaction and efficiency.

Other Centrix™ Insights Features that make Armis the go to platform to understand how teams and tools are performing:

Dashboards

Armis users benefit from powerful visualization capabilities for reporting and dashboarding. The brains behind these representations is the Armis Standard Query (ASQ), supporting natural language input and thus can be purpose-built to meet the precise need. Pivot tables are supported as well, eliminating the need to export the data to another tool for analysis.

Gauge Dashlets

The gauge visualization emphasizes the gap and helps you to focus on what matters first. Users can quickly customize any goal or KPI, and grasp progress in the blink of an eye to facilitate informed decision making.

Trend Over Time

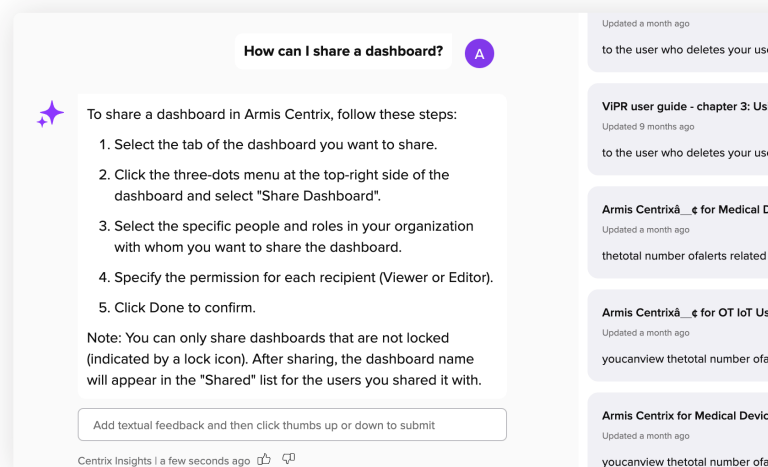

Executive reports are all about data visualization: It helps to communicate a clear message about the progress of a value over time. For example: CISOs may want to know if they have more devices with active endpoint agents compared to last month, so they can share progress with the CIO. "Trend Over Time" is available for gauge and count dashlets in Armis Centrix™.

Benchmarking

Industry Benchmarks delivers quantifiable metrics to track changes and improvements over time, and measure performance within your industry. The benchmarking feature enables you to see how your assets compare against a vast collection of assets from the Armis Intelligence Center.

Examples of Queries you can use:

- Where can I see a list of all detected vulnerabilities in my system?
- How do I prioritize vulnerabilities based on severity?
- How do I prioritize vulnerabilities based on the owner?
- What metrics should I track to measure the effectiveness of my vulnerability management program?
- How can I determine if a vulnerability is exploitable in my environment?
- What steps should I take after identifying a critical vulnerability?

Key Business Outcomes

- No Technical Jargon: Communicate with ease, using natural language.
- Intuitive Responses: Receive answers that are context-aware and relevant.
- Quick Problem-Solving: Get resolutions on the spot, reducing the need for external support.
- Increased Productivity: Benefit from immediate support and reduced operational delays.
- Smooth Integration: Fits naturally into your current systems and processes.
- Real-Time Access: Gain immediate insights and solutions.
