

# Simplify & Secure: Armis Centrix™ on AWS Marketplace for Seamless Cyber Exposure Management

Armis Centrix™ is a comprehensive cyber exposure management platform, powered by the Armis AI-driven Asset Intelligence Engine, designed to see, protect, and manage your entire attack surface. This seamless, frictionless, cloud-based platform proactively identifies and mitigates cyber asset risks, remediates vulnerabilities, blocks threats, and protects your entire attack surface.

The Armis platform runs entirely on AWS, and its integrations that pull asset and device data from other technologies are also powered by AWS.

## Key Features of Armis Centrix™ on AWS:

- **Comprehensive Cybersecurity Program:** Armis Centrix™ provides organizations with the ability to build a comprehensive cybersecurity program focused on Asset Management and Security, OT/IoT Security (SaaS and on-prem) Medical Device Security, and VIPR (Prioritization and Remediation) and Early warning.
- **AI-Driven Asset Intelligence Engine:** Core to Armis Centrix™ is its Asset Intelligence Engine, our giant cloud-based device security data lake—the largest in the world, tracking billions of managed unmanaged and IoT assets in real time. It enables Armis to classify assets and detect threats with high accuracy by comparing real-time asset state and behavior to “known-good” baselines.
- **Unified Visibility and Management:** The platform offers unified asset visibility and security for IT, IoT, IoMT, OT (SaaS and on Prem), cloud, and mobile assets. It provides continuous asset discovery and inventory management capabilities across these diverse asset types.

## Benefits of Purchasing Armis Centrix™ via AWS Marketplace

### 1 Faster Procurement and Deployment

**Streamlined Purchasing:** AWS customers gain a more efficient way to purchase Armis through a streamlined contract negotiation and procurement process.

**Budget Optimization:** Joint customers can leverage their unspent AWS credits to purchase through Marketplace, enabling acquisition even if budget might otherwise be constrained.

**Leverage AWS EDP/PPA:** Customers can leverage their existing AWS EDP or PPA (Enterprise Discount Program/Private Pricing Agreement) to purchase Armis Centrix™.

**Global, Instantaneous Deployment:** AWS enables Armis customers to deploy the software instantaneously anywhere in the world.

**Immediate Time to Value:** Getting started with the Armis platform is **fast and easy** as it is agentless, completely passive, and requires **no additional hardware**. It integrates quickly with existing IT/security tools with out-of-the-box integrations.

### 2 Easier and More Efficient Billing

**Integrated Billing:** Integrated billing on AWS Marketplace is very straightforward, with all costs appearing on a **single dashboard**.

**Seamless Integration with Existing Processes:** Purchasing through AWS Marketplace ensures seamless integration with existing billing processes, without disrupting current workflows.

### 3 Enhanced Security Posture and Operational Efficiency

**No Disruption:** Armis seamlessly integrates with existing IT and security stacks to quickly deliver contextual intelligence without disrupting current operations or workflows.

**Reduce Exposure and Risks:** Armis Centrix™ provides early warning of asset risk, offering time to address threats before an attack is launched. Full visibility and contextualization of all assets and their behavior reduce risk across the environment.

**Automated Remediation:** Adaptable prioritization, grouping of findings, and AI-driven ownership assignment drastically reduce Mean Time To Resolution (MTTR).

## Customer Success with Armis and AWS

**Colgate-Palmolive:** Gained **full visibility** to all network devices and traffic in both their AWS and distributed OT environments through a single SaaS platform running in AWS. This reduced IT incident response mean time from over an hour to under 5 minutes. Armis integrated with existing AWS & on-premise security tools, including AWS GuardDuty and Cloud Trail.

**Takeda:** Achieved **100% visibility** across each manufacturing environment, understanding the true attack surface of their plants with the AWS-based Armis Centrix platform.

**Mendix:** Deployed Armis Centrix™ through an agentless integration across their pipelines to their native AWS environment, including EKS, Security Hub, GuardDuty, and ControlTower, alongside third-party security tools. This led to an **80% reduction in manual reviews**, a **70% reduction in time spent on prioritization efforts**, an **80% reduction in time identifying and assigning fix responsibility**, and a **600% improvement in closed findings** on a monthly basis.

## Armis Centrix™ Key Benefits Include:

- Frictionless
- Full Device Visibility
- Continuous Passive Tracking
- Vulnerability Gap Analysis
- Automated Network Segmentation
- Automated Policy Enforcement
