

# Armis MCP Server

## A standardized bridge between AI models and external data sources

A new industry standard called MCP (Model Context Protocol) is about to tear down walls, acting as a universal remote for AI. This new paradigm simplifies complex integrations, enhances security, and allows for real-time access to information, fundamentally changing how AI applications are built and used.

## Transform LLMs from conversational agents into powerful, context-aware assistants

With Armis (MCP) support, your AI agent of choice can now safely and securely access Armis Centrix™ tenant data, license information, and product documentation.

Simply ask questions as you would in a casual conversation, and experience intuitive responses with recommendations that understand context and intent. This means you spend less time searching and more time acting on insights.

By providing a direct line between LLMs and Armis Centrix™, it transforms what's possible with AI agents:

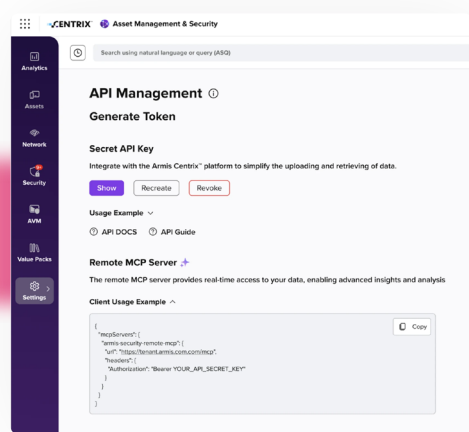

- **Access & Synthesize Data:** Query multiple data sources, information from different systems—like a CRM, a database, and a support ticket platform—all at the same time.
- **Return rich, synthesized responses:** Combine information from various sources into a single, cohesive, and easy-to-understand output.
- **Automate Complex Workflows:** Perform a sequence of operations across multiple platforms. For example, an AI could receive a customer service request, create a ticket in one system, and then update a customer record in another.
- **Maintain contextual understanding:** The AI preserves its state and remembers the context of the task, even as it moves between different systems.

## We're On The Verge Of a New Era

AI Becomes a True Partner, Not Just a Glorified Chatbot. The benefits of this new approach are massive and will ripple across every industry.

## Key Business Outcomes

- 
**Empowered teams**  
 MCP support lets users take action directly from their favorite agents—no need to switch consoles. Simply tell the AI what you need, and the AI, via MCP, handles all the “grunt work” of connecting to different tools and services.
- 
**Reduced overhead**  
 Turn complex, multi-step tasks into a simple, single request.
- 
**Improved security posture and remediation**  
 Use natural language workflows to quickly identify and fix vulnerabilities, so you can remediate risks faster than ever before.
- 
**Simplified maintenance**  
 Armis manages the MCP server so you don't have to worry about it. This means when Armis or another tool updates its API or functionality, the change is handled on the server side, so your AI's integration remains unaffected.

Armis, the cyber exposure management & security company, protects the entire attack surface and manages an organization's cyber risk exposure in real time.

In a rapidly evolving, perimeter-less world, Armis ensures that organizations continuously see, protect and manage all critical assets - from the ground to the cloud. Armis secures Fortune 100, 200 and 500 companies as well as national governments, state and local entities to help keep critical infrastructure, economies and society stay safe and secure 24/7.

Armis is a privately held company headquartered in California.
