

Securing the Federal Mission with Armis Centrix™

See, Protect, and Manage your entire attack surface

FedRAMP-Authorized Cyber Exposure Management for Full-Spectrum Visibility Security and Control

In today's perimeter-less, high-risk cyber environment, federal agencies must operate with complete visibility into every connected asset across their infrastructure—whether IT, OT, IoT, or medical devices. Armis Centrix™ is a FedRAMP-authorized, AI-powered Cyber Exposure Management Platform designed to help federal organizations reduce cyber risk, ensure compliance, and strengthen mission resiliency.

Cyber Visibility Is Non-Negotiable

Adversaries are growing more sophisticated and often know more about your environment than you do. Armis solves this by providing real-time, continuous discovery and monitoring of every connected device whether managed or unmanaged, across your environment. With Armis, agencies gain:

- | 100% visibility of all assets
- | Contextual risk prioritization based on threat intelligence, asset criticality, and operational impact
- | Informed decision-making for faster remediation

Cloud-Native, Agentless, and Frictionless

Built for rapid deployment and scale, Armis Centrix™ is a cloud-native, agentless solution that integrates seamlessly with your existing IT and security stack. With hundreds of out-of-the-box integrations, it delivers immediate value without disrupting operations or adding complexity.

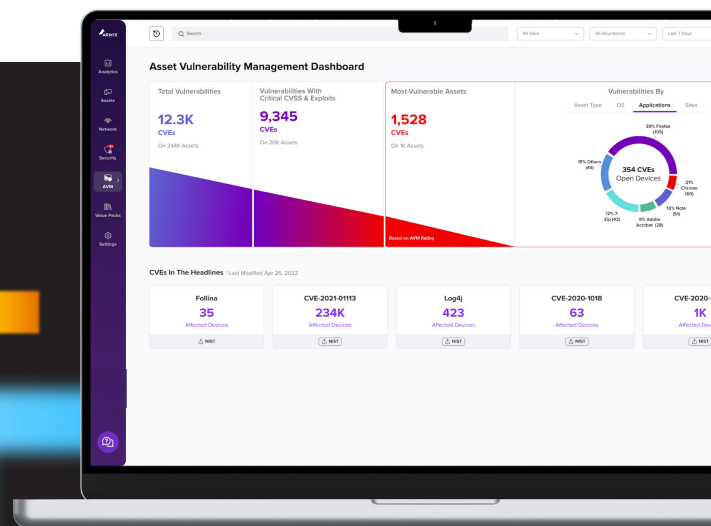

Armis Centrix™ is authorized at FedRAMP Moderate (High Expected Summer 2025)

Operational Success through Proactive Cyber Defense

Armis Centrix™ enables federal cyber leaders to operationalize asset and vulnerability intelligence to protect the entire attack surface. The platform empowers your agency to:

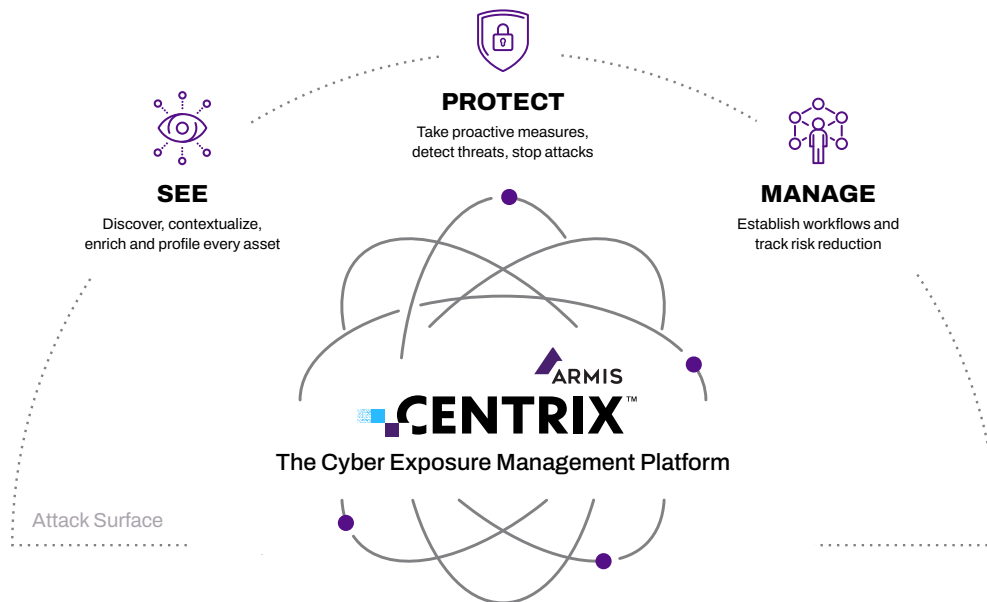

- | Proactively manage cyber risk exposure
- | Align IT, security, and mission stakeholders
- | Achieve cross-domain cyber situational awareness
- | Improve MTTR with automated remediation workflows

A Modular Platform Built for the Federal Mission

Armis Centrix™ is composed of five AI-driven products, each designed to protect the entirety of your cyber environment, on-prem, in the cloud, and at the edge.

The Armis Centrix™ Product Suite

Asset Management & Security Essentials

Maintain a real-time, complete inventory of every asset to effectively manage your attack surface.

Asset Management & Security Elite

Add network inspection and behavior analytics to discover and protect unmanaged assets including OT, IoT, and medical Devices.

OT/IoT Security

Protect operational and connected assets to ensure uptime, safety, and secure critical infrastructure.

AVM - Prioritization & Remediation

Consolidate and prioritize vulnerabilities and security findings with automated workflows for fast, targeted remediation.

Early Warning

Get ahead of threats with AI-powered early warning capabilities informed by intelligence from the Dark Web, deception technologies, and human sources.

Armis is trusted to protect federal missions.

With the industry's leading asset intelligence and a FedRAMP-authorized platform, Armis Centrix™ delivers the visibility, control, and automation agencies need to stay resilient, secure, and compliant 24/7.

Let's protect the mission together.
