

# Armis Centrix™ for Financial Services

Take charge of your networks, mitigate systemic risk and improve operational resilience while maintaining compliance regulations in your Financial Services organizations.

## Protect and Manage Complex Financial Institution Environments with Armis Centrix™

Traditional cybersecurity is ineffective in financial environments. Armis Centrix™ empowers customers to manage their attack surface and consolidate, prioritize and remediate vulnerabilities. With Armis, banks and financial institutions can detect and stop attacks, control the blast radius and ensure their most critical assets are protected.

## Designed to Address Operational Blind Spots and Attack Surface Expansion

Powered by our AI-driven Asset Intelligence Engine, Armis sees your entire attack surface holistically. Through integrations with your existing solutions, telemetry data to add deep packet inspection, active querying and asset behaviour and collective intelligence gathered from our extensive multibillion asset database. Now you can:

### See

Discover, contextualize, enrich and profile every asset

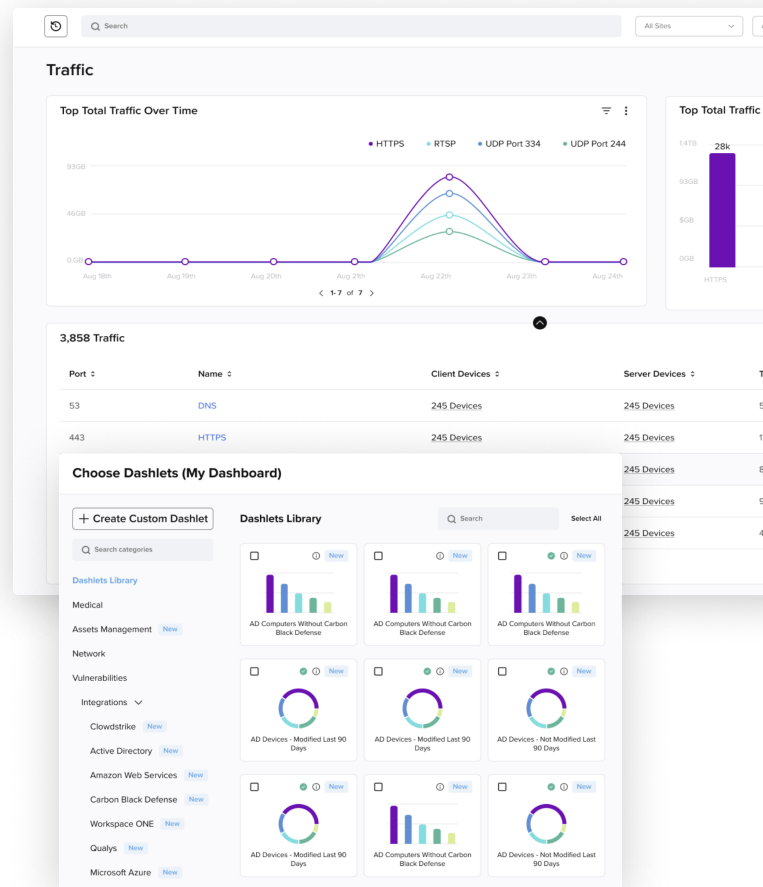

### Protect

Take measures and prioritize efforts against all exposures

### Manage

Establish workflows and track risk reduction

## Supercharge the path to DORA compliance with Armis for Financial Services Use Cases:

### Deep Contextual Visibility Into All Assets

By providing complete asset visibility across all asset types, Armis Centrix™ gives financial services organizations complete control over their assets. It allows them to pull asset-related data from relevant IT and security tools to obtain rich, contextual intelligence about each asset in the inventory. The data is not only aggregated, but also deduplicated and normalized.

### Business Critical Risk-Based Prioritization for Financial Services

Armis Centrix™ for Vulnerability Prioritization and Remediation empowers financial organizations to streamline their focus, pinpointing the most critical vulnerabilities that pose the highest risk to their operations. Using real-world intelligence, Armis analytics in conjunction with the customer's perception of risk delivers organizations a true enterprise view of their vulnerabilities.

### Achieve a Proactive Cybersecurity Posture

Armis Centrix™ aggregates all enterprise silos of vulnerability reporting. This significantly improves the efficiency with which security operation teams can remediate threats within the organization and mitigates multiple instances of cyber risk.

### Address the Mounting Pressure of Financial Compliance Frameworks

Armis Centrix™ gives financial institutions a platform-based approach to manage their assets, security risk posture and compliance gap analysis. Having complete accurate and real-time access to your data will allow IT and security leaders to future-proof their defense and meet regulatory compliance.

## Key features that make Armis the go-to platform for total exposure management.

- Smart Active Querying to safely deep dive into asset visibility through smart querying.
- Actionable Threat Intelligence Feed included with Armis Centrix for OT/IoT Security allows you to leverage our dark web insights.
- Maps to Compliance Frameworks such as DORA.
- The Armis Intelligence Engine arms customers with global contextual data
- Complete non-intrusive discovery exposing legacy software that current tooling is unable to detect.
- Create an up-to-date inventory of which applications are deployed on which assets.
- Create policies and queries that highlight boundary violations, then automate your segmentation processes with intelligent recommendations.
- Agentless solution which works with all devices, managed and unmanaged, IT or OT/ICS.
- Assist your zero trust validation. This framework ensures that all devices and users are continuously verified.
- Risk Management. Identify and monitor risks
- Vulnerability Monitoring. Keep an eye on vulnerabilities and use Armis Centrix™ for Vulnerability Prioritization and Remediation to complete your Vulnerability management lifecycle.
- Identify any abnormal or risky activity with network baseline rules.
- Monitor connectivity and track asset behavior. Create a real-time network baseline.

## Why FIs are Trusting Armis to Deliver Better Outcomes

- 1 ROI with production agility and efficiency, resources can be used more effectively.
- 2 Cyber resilience with complete asset discovery ensures visibility of all assets connected into your organization.
- 3 Future-Proofed cybersecurity with Armis, organizations are ready for future digitalization.
- 4 Operational resilience with Armis for Financial Services, organizations are reducing ransomware attacks on their critical infrastructure.
- 5 Compliance with DORA and other critical regulations.
- 6 Reputation and trust. Organizations using Armis for Financial Services are industry leaders upholding best cybersecurity practices.
- 7 Speed of Deployment is critical in manufacturing where quick resolution and reduction of risk is a high priority.
