

Armis Overview

One of the most influential societal changes we have seen in the last 50 years is our reliance on technology. The benefits thereof have enriched our lives, but it is not without its risk.

There is scarcely a week that goes past where there is not a security breach that results in stolen data, financial losses and shaken customer confidence. In the case of organizations involved in critical infrastructure operations, any security incident can put lives directly at risk.

Security pundits point to the increasing attack surfaces along with new assets, new vulnerabilities and connected networks as key reasons for attacks growing in frequency, severity and scope. While a financial payday that hackers point to as a primary reason for their activities, there is also an increase in insider threats as well as cyber espionage and terrorism. Without a paradigm shift to the way we secure our environments, this trend is likely to continue unabated, until now.

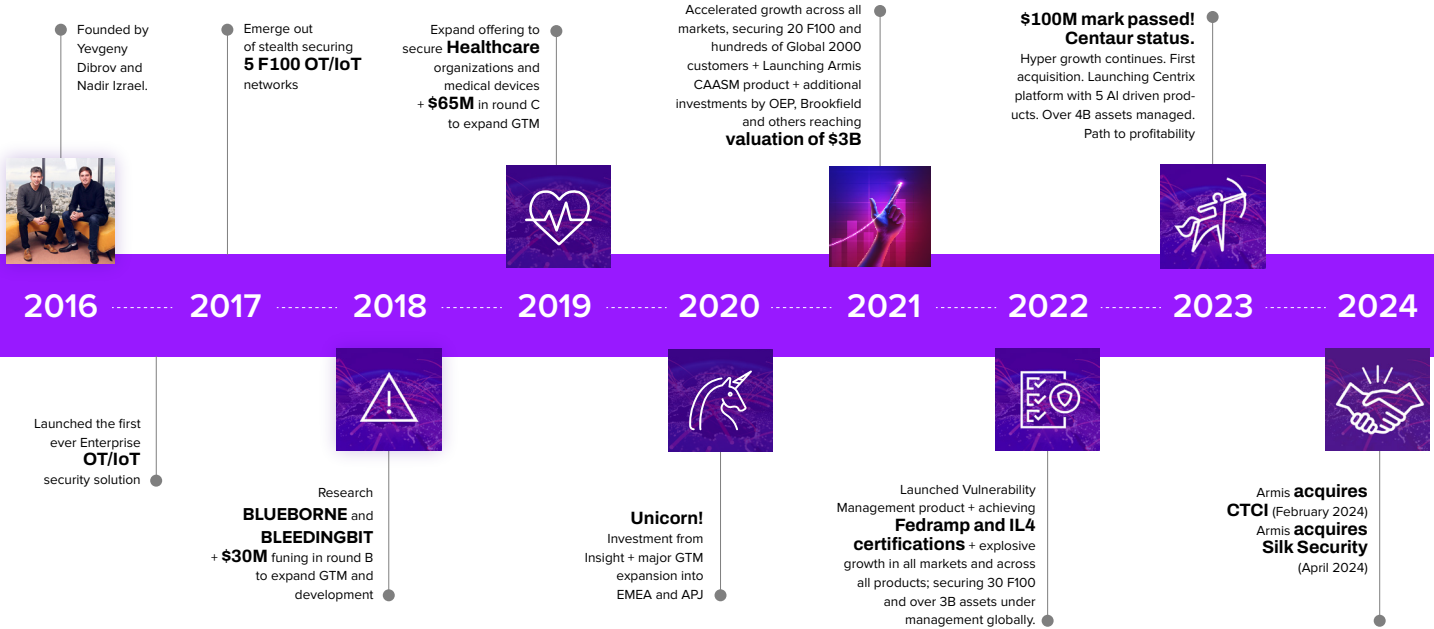

Armis – THE Asset Intelligence Cybersecurity Company

Armis recognized that most attacks are successful, because organizations invariably have security blind spots. Simply put, the organization did not know and thus, the threat became a reality.

In 2015, armed with this knowledge, Armis' mission to enable enterprises to adopt new connected devices without fear of compromise by cyber attack became clear.

Today Armis, the asset intelligence cybersecurity company, protects the entire attack surface and manages the organization's cyber risk exposure in real time. In a rapidly evolving, perimeter-less world Armis ensures that organizations continuously see, protect and manage all critical assets. Armis secures Fortune 100, 200 and 500 companies as well as national governments, state and local entities to help keep critical infrastructure, economies and society stay safe and secure 24/7.

The Armis Centrix™ Platform

Armis Centrix™ is a seamless, frictionless, cloud-based platform that proactively mitigates all cyber asset risks, remediates vulnerabilities and security findings, blocks threats and protects your entire attack surface. Armis Centrix™ works in conjunction with your existing security ecosystem and gives organizations peace of mind, knowing that all critical assets are protected.

Asset Management & Security

Armis Centrix™ for Asset Management and Security continuously discovers all your assets, including IT, IoT, cloud and virtual, managed or unmanaged.

Delivered as an agentless SaaS platform, Armis seamlessly integrates with hundreds of existing IT and security solutions to quickly discover and prioritize all exposures (risks, CVE's, misconfiguration) without disrupting current operations or workflows.

With Armis' network traffic analysis and deep packet inspection, IT and security teams can visualize network communications and display asset risks to more efficiently manage network segmentation and enforcement. Our world class anomaly and policy detection capabilities are based on single device baselines and known good behaviors, empowers security operations teams to detect network threats with a high degree of accuracy. Integrations to common network enforcement systems and SOC tools deliver automated workflows to improve incident response time and reduce Mean-time-to-Resolution.

OT/IoT Security

Operational technology (OT) systems include a mix of IT, OT, IoT & IoMT assets.

These environments host the enterprise's most critical assets and as such continue to be a rich target for cybercriminals. Armis Centrix™ for OT secures manufacturing and critical infrastructure by achieving full visibility across IT, OT, IoT and IoMT assets. Control, monitor and protect critical OT assets and critical infrastructure using the industry's most advanced cyber exposure platform.

Medical Device Security

Healthcare is constantly targeted by adversaries and can impact patient care.

Health networks are mostly flat and host many unpatchable critical medical devices alongside IT and IoT assets. Armis Centrix™ for Medical Device Security discovers and secures every clinical asset and tracks inventory utilization. Armis Centrix™ is the industry's most comprehensive asset intelligence platform. Get complete visibility and maximize security across all managed or unmanaged medical devices, clinical assets, and the entire healthcare device ecosystem - with zero disruption to patient care.

Vulnerability Prioritization and Remediation

Modern organizations are overwhelmed by the sheer volume of security findings and vulnerabilities in their environment.

Modern organizations are grappling with a barrage of security alerts, thus creating a significant management gap between finding and prioritizing security findings and scaling the prioritization and remediation process to secure the attack surface. Armis Centrix™ for Vulnerability Prioritization and Remediation offer a comprehensive solution for risk prioritization and resolution lifecycle management across code, infrastructure, cloud and application findings. It enables advanced security and collaborative exposure management by identifying and consolidating security issues, communicating and ranking priorities, finding and assigning the right owners, and collaborating with developers and operations stakeholders to effectively remediate and reduce risk.

Actionable Threat Intelligence

Stopping the attack before it starts.

The landscape of cybersecurity has been historically dominated by a reactive approach. Organizations have found themselves in a constant cycle of responding to threats and attacks after they occur, leading to compromised data, damaged reputations, and significant financial loss.

Armis Centrix™ for Actionable Threat Intelligence is an early warning system that empowers you with early warning intelligence to anticipate threats, understand their potential impact, and take preemptive action to neutralize them, effectively moving the security posture from defense to offense. Armis Centrix™ for Actionable Threat Intelligence offers a revolutionary AI technology that leverages dark web, dynamic honeypots and HUMINT to stop attacks before they impact your organization.

Armis Labs

Leading research and reality for next gen asset security.

Armis Labs, a division of Armis, is a team of seasoned security professionals dedicated to staying ahead of the ever-evolving cybersecurity landscape. With a deep understanding of emerging threats and cutting-edge methodologies, Armis Labs empowers organizations with unparalleled visibility and expertise to protect against the threats that matter most, right now.

Armis Labs is more than just a cybersecurity division; it's a thought leader in the field, constantly pushing the boundaries of knowledge and innovation. Through active participation in industry conferences, publication of research papers, and contribution to industry wide projects, Armis Labs shapes the discourse around emerging cyber threats and mitigation strategies.
