

SOLUTION BRIEF

Armis Centrix™ Revolutionizing Security Remediation

Modern organizations are grappling with a barrage of security alerts, thus creating a significant management gap between finding and prioritizing security findings and scaling the prioritization and remediation process to secure the attack surface. This gap poses a critical risk as it prolongs the time between identifying security incidents and implementing necessary fixes. As a result, businesses face longer periods of vulnerability to potential threats, exacerbated by inefficient processes and inconsistent risk prioritization practices.

Silk Security is a strategic addition to our mission of providing comprehensive security solutions including advanced cloud security capabilities. Silk Security capabilities seamlessly integrate into Armis Centrix™, addressing the historical gap in cybersecurity between security findings and actionable remediation.

Product Functionality and Benefits

The enhanced capabilities empowers enterprises to adopt a strategic and sustainable approach to resolving code, infrastructure, and application risks. Armis takes a data-centric, AI-driven approach to enable security stakeholders to better identify risks, communicate priorities, assign owners, and collaborate with developers and operations stakeholders to efficiently manage the entire lifecycle of the resolution management process.

Key Capabilities & Outcomes Added to Armis Centrix™

01 | Gain Full Situational Awareness

All assets, devices, and code pipeline down to an extremely granular level, and fully data source agnostic whether physical or cloud based.

02 | Consolidate and Organize Security Findings

Bring order to the findings chaos (including CVEs, misconfigurations, EOL software, licensing issues, web app vulns, audit findings, network risks etc). Agentless API integrations ingest, aggregate and correlate findings, eliminates duplicate alerts from multiple tools and allows teams to sort findings and group findings based on relationships.

03 | Identify Risk

Get alerted to policy violations, questionable events, behaviors and vulnerabilities.

04 | Automate Prioritization

Clearly determine and assign remediation priorities on all findings based on the evaluation of environmental factors, asset intelligence, custom metadata, and configurable risk severity.

05 | High Impact Fix Focus

Hone in on the earliest point in the code pipeline where a fix will resolve the largest number of related run-time and production security issues.

06 | Assign Remediation Owners

Predictively assign ownership for all fixes based on automated mapping, with ongoing AI-based refinement based on operations feedback.

07 | Centralize Reporting

Understand how teams and the tools being used are performing through a consolidated dashboard, and measure the effectiveness of the remediation process. Provide risk trends through an executive dashboard.

08 | Complete Risk Resolution Communication Workflows

Scale operations with bi-directional collaboration, integrations, and advanced embedded workflows that enable self-service for risk resolution.

Why Choose Armis

Armis offers a revolutionary solution to address the management gap in cybersecurity, thereby providing a streamlined approach to proactive risk mitigation. By integrating the Silk Security platform into Armis Centrix™, organizations can effectively bridge the gap between detection, prioritization and remediation, strengthening their security posture and ensuring operational resilience in today's dynamic threat landscape.

Proof Points

- Cut time spent on identifying owners and assigning tickets by 90%, with custom ticketing rules.
- Reduce findings volume in complex environments by 50-1 with ML deduplication.
- Improve MTTR by as much as 90%.
- Halved the time for resolution of critical findings, with ongoing improvements in reduction of response times anticipated.
- Increase the number of closed findings by 7x over three months, reducing overall threat debt.

By leveraging cutting-edge AI-based technology, Armis Centrix™ empowers organizations to effectively and comprehensively find and mitigate risks wherever they are, enhance security posture, and ensure operational resilience amid the dynamic threat landscape.

Armis, the asset intelligence cybersecurity company, protects the entire attack surface and manages the organization's cyber risk exposure in real time.

In a rapidly evolving, perimeter-less world Armis ensures that organizations continuously see, secure, protect and manage all critical assets.

Armis secures Fortune 100, 200 and 500 companies as well as national governments, state and local entities to help keep critical infrastructure, economies and society safe and secure 24/7.

Armis is a privately held company headquartered in California.
