

SOLUTION BRIEF

Achieving Operational Resilience through Automated Cyber Exposure Management with Armis Centrix™

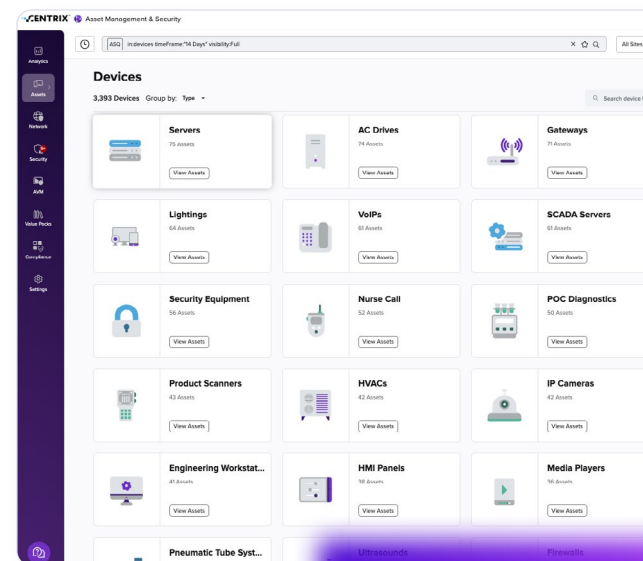

The U.S. federal government is increasingly challenged by a surge in both internal and external cyber threats, amplified by the rapid growth of converged technologies such as IT, IoT, and OT devices. Maintaining strong cybersecurity standards is becoming more difficult amid directives to achieve more with less due to tightening budgets and fewer resources. Staffing levels and contracts across federal IT continue to undergo reevaluation, and a brand new approach is required.

These challenges are further compounded by the need for agencies to integrate data from varied sources, maintain its integrity, and support responsible collection and synchronization—core components of modern federal technology initiatives. This objective aims to eliminate silos, promoting interoperability between agency networks and systems. However, the current lack of unified visibility and real-time actionable insights leaves agencies vulnerable to inefficiencies, unmonitored changes, and security risks. Instances of unaddressed alerts and overwhelmed cybersecurity teams have become all too common.

Armis is uniquely positioned to support federal agencies as they navigate this changed environment. Achieve better utilization of your existing investments in technologies and personnel by leveraging Armis Centrix™ to see what you have, what and how it is being used, and where your areas of cost savings may lie.

Break Down the Silos — Enhancing your Security Posture by Shrinking the Decision Window with Actionable Data

Armis Centrix™ delivers unparalleled visibility, real-time risk mitigation, and operational transparency to federal networks, addressing the unique challenges faced by U.S. federal agencies. Data silos, long considered a barrier to government efficiency and cybersecurity, result in fragmented information, duplication of efforts, and hidden risks. Armis Centrix™ supports efforts to modernize cyber exposure management and security within federal systems by seamlessly integrating with existing infrastructures, unifying data, and providing comprehensive asset visibility to help agencies identify and prioritize vulnerabilities, eliminate inefficiencies, and strengthen their cybersecurity posture. By facilitating collaboration and proactive responses, Armis Federal enables agencies to reduce their attack surface without resource-intensive deployments.

Why Armis Centrix™ is the Go-To Platform for Total Cyber Exposure Management

As cyber threats escalate and budgets tighten, federal agencies need a solution that delivers ironclad security without operational overhead. Armis Centrix™ meets this challenge head-on, offering a comprehensive, intelligent, and cost-effective approach to securing the government's most critical assets.

Tailored for High-Stakes Federal Environments

Armis Centrix™ is purpose-built for these high-risk environments. It aligns with key federal cybersecurity mandates, including FedRAMP, FISMA, and NIST 800-53, ensuring compliance is maintained without sacrificing agility.

Unified Asset Intelligence Across All Domains

Armis Centrix™ breaks down silos by delivering real-time, centralized visibility across all environments, including IT, OT, IoT, and IoMT.

AI-Powered Automation That Eases the Resource Burden

Armis Centrix™ integrates AI-driven intelligence to automate the heavy lifting by detecting anomalies, prioritizing risks, and orchestrating response actions without manual intervention.

Maximizes the Value of Existing Investments

Armis Centrix™ is designed to work seamlessly with existing federal tools and platforms already in use, like SIEMs, CMDBs, and other security systems. This means agencies don't need to rip and replace.

Proactive Risk Reduction Without Added Costs

Armis Centrix™ is already trusted by multiple U.S. federal agencies, defense contractors, and organizations responsible for securing national critical infrastructure.

Future-Proofing with Freedom to Choose: Cloud or On-Prem

As agencies grapple with unknowns such as future missions, locations, and funding, Armis provides the freedom to choose between a SaaS or On-Prem solution. The Armis Centrix™ platform scales flexibly to provide security across complex environments, and Armis Centrix™ On-Prem is specifically tailored for air-gapped or sequestered operational environments.

Time to Value

Cloud-based cyber exposure management platform that deploys rapidly, offering actionable insights within weeks to ensure agencies get results fast, consolidate tools and leverage current investments.

Outcomes That Speak for Themselves

Armis Federal has helped federal agencies achieve faster incident response, improved asset visibility, and optimized workflows.

- ✓ Investigations reduced from 1 hour to 5 minutes with improved response time.
- ✓ Enhanced oversight of OT systems, decreasing risks from unmonitored changes.
- ✓ Streamlined compliance audit preparation through accurate, real-time data reporting.
- ✓ Detected 221,000 high-risk IT and IoT assets for a large federal agency with a limited deployment.
- ✓ Integrated 15+ tools in an agency security stack to centralize visibility and automate response.
- ✓ Dramatically improved Splunk asset data accuracy and integrity.

Current federal IT spending is under a microscope, including cybersecurity measures that protect the citizens of our great nation. IT modernization has been a goal of the federal government for years, and the current Administration has put an emphasis on accelerating that effort. Legacy models are not sufficient in the current climate. Armis is a trusted partner and can help federal agencies avoid any disruptions to the mission through rapid optimization and time to value.

Armis, the cyber exposure management & security company, protects the entire attack surface and manages an organization's cyber risk exposure in real time.

In a rapidly evolving, perimeter-less world, Armis ensures that organizations continuously see, protect and manage all critical assets - from the ground to the cloud. Armis secures Fortune 100, 200 and 500 companies as well as national governments, state and local entities to help keep critical infrastructure, economies and society stay safe and secure 24/7.

Armis is a privately held company headquartered in California.
